

AP Calculus AB Notes

Stasya

Fall 2023 & Spring 2024

Contents

1	Limits and Continuity	3
1.1	Introduction to Limits	3
1.2	Limits Properties	3
1.3	Continuity	3
1.4	One-Sided Limits	3
1.5	Limits with Infinity	3
1.6	Limits with Trig	3
2	Differentiation: Definition and Fundamental Properties	4
2.1	Average Rate of Change and Secant Lines	4
2.2	Definition of Derivative	4
2.3	Derivative Rules	4
2.4	Differentiation	4
2.5	Product Rule	4
2.6	Quotient Rule	4
2.7	Tangent Lines	4
2.8	Linear Approximation	4
2.9	Continuity & Differentiability	4
3	Differentiation: Composite, Implicit, and Inverse Functions	5
3.1	Chain Rule	5
3.2	L'Hopital's Rule	5
3.3	Implicit Differentiation	5
3.4	Inverse Functions & Derivatives	5
4	Contextual Applications of Differentiation	6
4.1	Related Rates	6
4.2	Intro to Position, Velocity, & Acceleration	6
4.3	Numerical Position, Velocity, & Acceleration	6
4.4	Graphing Position, Velocity, & Acceleration	6
4.5	Analytical Positions, Velocity, & Acceleration	6
5	Analytical Applications of Differentiation	7
5.1	Extreme Values	7
5.2	1st Derivative Test	7
5.3	2nd Derivative Test	7
5.4	Mean Value Theorem and Rolle's Theorem	7
5.5	Optimization	7
5.6	Curve Sketching	7
6	Integration and Accumulation of Change	8
6.1	Left and Right Riemann Sums	8
6.2	Midpoint Sums	8
6.3	Trapezoidal Sums	8
6.4	Definite Integrals	8
6.5	Fundamental Theorem of Calculus	8
6.6	Anti-Derivatives	8
6.7	2nd Fundamental Theorem of Calculus	8
6.8	Trig Integrals	8
6.9	U-Sub	8
6.10	Definite U-Sub	8
6.11	Complex U-Sub	8
7	Differential Equations	9
7.1	Slope Fields	9

7.2	Separation of Variables	9
8	Applications of Integration	10
8.1	Average Value	10
8.2	Net Change	10
8.3	Area between Two Curves	10
8.4	Volume - Disk & Washer	10
8.5	Volume - Cross Sections	10

1 Limits and Continuity

1.1 Introduction to Limits

1.2 Limits Properties

1.3 Continuity

1.4 One-Sided Limits

1.5 Limits with Infinity

1.6 Limits with Trig

2 Differentiation: Definition and Fundamental Properties

2.1 Average Rate of Change and Secant Lines

2.2 Definition of Derivative

2.3 Derivative Rules

2.4 Differentiation

2.5 Product Rule

2.6 Quotient Rule

2.7 Tangent Lines

2.8 Linear Approximation

2.9 Continuity & Differentiability

3 Differentiation: Composite, Implicit, and Inverse Functions

3.1 Chain Rule

3.2 L'Hopital's Rule

3.3 Implicit Differentiation

3.4 Inverse Functions & Derivatives

4 Contextual Applications of Differentiation

4.1 Related Rates

4.2 Intro to Position, Velocity, & Acceleration

4.3 Numerical Position, Velocity, & Acceleration

4.4 Graphing Position, Velocity, & Acceleration

4.5 Analytical Positions, Velocity, & Acceleration

5 Analytical Applications of Differentiation

5.1 Extreme Values

5.2 1st Derivative Test

5.3 2nd Derivative Test

5.4 Mean Value Theorem and Rolle's Theorem

5.5 Optimization

5.6 Curve Sketching

6 Integration and Accumulation of Change

6.1 Left and Right Riemann Sums

6.2 Midpoint Sums

6.3 Trapezoidal Sums

6.4 Definite Integrals

6.5 Fundamental Theorem of Calculus

6.6 Anti-Derivatives

6.7 2nd Fundamental Theorem of Calculus

6.8 Trig Integrals

6.9 U-Sub

6.10 Definite U-Sub

6.11 Complex U-Sub

7 Differential Equations

7.1 Slope Fields

7.2 Separation of Variables

8 Applications of Integration

8.1 Average Value

8.2 Net Change

8.3 Area between Two Curves

8.4 Volume - Disk & Washer

8.5 Volume - Cross Sections
